Prenatal DDT Exposure Tied to Nearly Four-fold Increase in Breast Cancer Risk

The story about this research was featured on **NBC Nightly News on Father's Day, June 21, 2015**. Watch the [NBC Nightly News Report](#), read about it in [National Geographic](#), [see the full study](#) and share it with your networks.

Your family's participation in health research began in the 1960's in the Child Health and Development Studies—the CHDS for short. Without your family's help, the information from our new breast cancer study would have been lost forever. Thank you so much for being a CHDS family. With your help, we are learning from the past to protect future generations.

Please feel free to share this note with other family members. We do not have everyone's email.

Best regards,
Barbara Cohn, PhD
CHDS Director
